European Technical Assessment

**ETA-13/0421
of 29/09/2017**

General part

Technical Assessment Body issuing the European Technical Assessment

Instytut Techniki Budowlanej

Trade name of the construction product

WKSPW

Product family to which the construction product belongs

Fastening screws for sandwich panels

Manufacturer

P.H. HAMAR Sp. J. B. i H. Grzesiak
ul. Hutnicza 7
81-061 Gdynia, Poland

Manufacturing plant

P.H. HAMAR Sp. J. B. i H. Grzesiak
ul. Hutnicza 7
81-061 Gdynia, Poland

This European Technical Assessment contains

36 pages including 31 Annexes which form an integral part of this assessment

This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of

European Assessment Document (EAD)
EAD 330047-01-0602 "Fastening screws for sandwich panels"

This version replaces

ETA-13/0421 issued on 21/06/2013

This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific part

1. Technical description of the product

The fastening screws for sandwich panels WKSPW are a self-drilling and self-tapping screws listed in Table 1. The fastening screws WKSPW (H) are made of galvanized carbon steel. The fastening screws WKSPW PROTECT (H) are made of galvanized carbon steel additionally protected by ceramic coating PROTECT. The fastening screws WKSPW (HS2) are made of stainless steel (bi-metal). Screws are supplied with a steel washer and an EPDM sealing ring. For details see the Annexes 2 to 29. All screws can be completed with additional steel washer PWP (see Annex 30).

The fastening screw for sandwich panels and the corresponding connections are subject to tension and shear forces.

Table 1

No.	Screw	Material	Annex
1	WKSPW (H) 5,5/6,3 x L	galvanized carbon steel	2, 3
2	WKSPW (H) 5,5/6,3-20 x L	galvanized carbon steel	4, 5
3	WKSPW PROTECT (H) 5,5/6,3 x L	galvanized carbon steel with PROTECT coating	6 to 9
4	WKSPW PROTECT (H) 5,5/6,3-20 x L	galvanized carbon steel with PROTECT coating	10, 11
5	WKSPW (H) 6,5 x L	galvanized carbon steel	12, 13
6	WKSPW (H) 5,5/6,3-12 x L	galvanized carbon steel	14, 15
7	WKSPW PROTECT (H) 5,5/6,3-12 x L	galvanized carbon steel with PROTECT coating	16 to 19
8	WKSPW PROTECT (H) 5,5/6,3-16 x L	galvanized carbon steel with PROTECT coating	20 to 23
9	WKSPW (HS2) 5,5/6,3 x L	stainless steel	24, 25
10	WKSPW (HS2) 5,5/6,3-12 x L	stainless steel	26, 27
11	WKSPW (HSA2) 6,5-12 x L	stainless steel	28, 29

2. Specification of the intended use in accordance with the applicable European Assessment Document (EAD)

The fastening screws for sandwich panels are intended to be used for fastening sandwich panels to steel or timber substructures. For details see the Annexes 2 to 29. The component to be fastened is component I and the supporting structure is component II. The sandwich panel can either be used as wall or roof cladding or as load bearing wall and roof element.

The intended use comprises fastening screws and connections for indoor and outdoor applications. Fastening screws which are intended to be used in external environments with $\geq C2$ corrosion according to the standard EN ISO 12944-2 are made of stainless steel.

Furthermore the intended use comprises connections with predominantly static loads (e.g. wind loads, dead loads).

Example of execution of a connections are given in Annex 1.

The provisions made in this European Technical Assessment are based on an assumed working life of the fasteners of 25 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer or Technical Assessment Body, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3. Performances of the product and references to the methods used for their assessment

3.1. Performance of the product

3.1.1 Mechanical resistance and stability (BWR 1)

The characteristic values of the shear resistance of connections and tension resistance of connections with the fasteners as well as the maximum head displacement are given in Annex 2 to 29. The values were determined by tests according to EAD 330047-01-0602.

The design values shall be determined according to Annex 31 and EAD 330047-01-0602.

For the corrosion protection the rules given in EN 1993-1-3, EN 1993-1-4 and EN 1999-1-4 shall be taken into account.

3.1.2 Safety in case of fire (BWR 2)

The fastening screws are considered to satisfy the requirements of performance class A1 of reaction to fire, in accordance with the provisions of the EC Decision 96/603/EC (as amended) without the need for testing on the basis of its listing in that decision.

3.1.3 Hygiene, health and the environment (BWR 3)

Regarding the dangerous substances there may be requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Regulation, these requirements need also to be complied with, when and where they apply.

3.2. Methods used for the assessment

The assessment of fitness of the fasteners for the declared intended use has been made in accordance with EAD 330047-01-0602.

4. Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

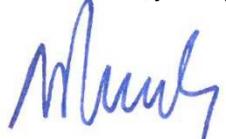

According to Decision 1998/214/EC, amended by 2001/596/EC, of the European Commission the system 2+ of assessment and verification of constancy of performance applies (see Annex V to Regulation (EU) No 305/2011).

5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document (EAD)

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at the Instytut Techniki Budowlanej.

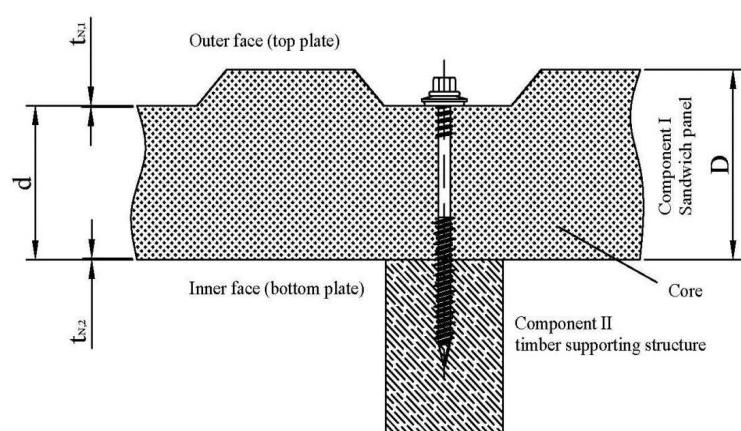

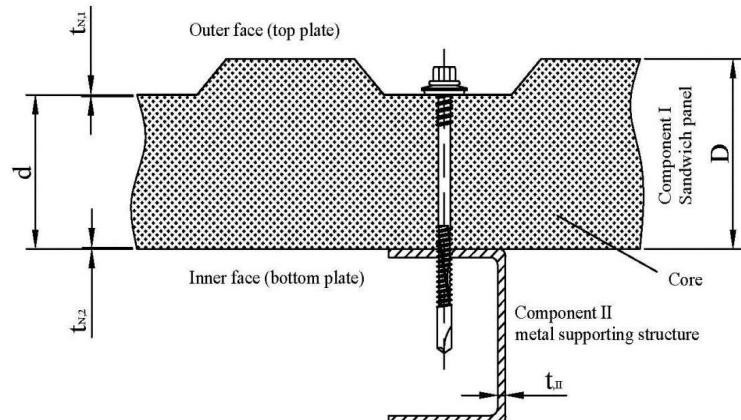

For type testing the results of the tests performed as part of the assessment for the European Technical Assessment shall be used unless there are changes in the production line or plant. In such cases the necessary type testing has to be agreed between Instytut Techniki Budowlanej and the notified body.

WKSPW Fastening screws for sandwich panels										Annex 13 of European Technical Assessment ETA-13/0421
WKSPW (H) 6,5 x L with hexagon head and steel sealing washer $\geq \varnothing 19 \text{ mm}$										

Materials: Fastener: carbon steel – SAE 1022, quenched, tempered and galvanized ($\geq 12 \mu\text{m}$) Washer: metallic washer made of zinc-coated carbon steel with EPDM sealing ring Component I: S280GD, S320GD or S350GD – EN 10346 Component II: S235 – EN 10025-1, S280GD, S320GD or S350GD – EN 10346																																																																																																																																																																																																																																																						
Drilling capacity: $\Sigma(t_{N2} + t_{II}) \leq 12 \text{ mm}$																																																																																																																																																																																																																																																						
Timber substructure No performance assessed

WKSPW Fastening screws for sandwich panels							Annex 15 of European Technical Assessment ETA-13/0421																																																																																																																																																																																																																																						
WKSPW (H) 5,5/6,3-12 x L with hexagon head and steel sealing washer $\geq \varnothing 19 \text{ mm}$																																																																																																																																																																																																																																													

Materials:

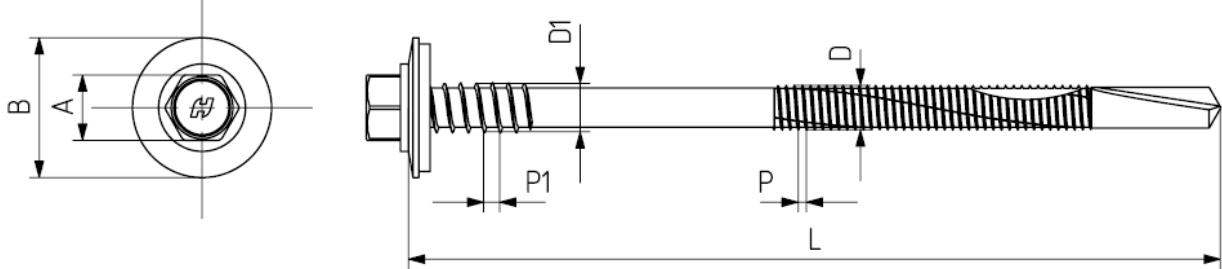

- Fastener:** carbon steel – SAE 1022, quenched, tempered and galvanized, additional coating PROTECT
- Washer:** metallic washer made of zinc-coated carbon steel with EPDM sealing ring
- Component I:** S280GD, S320GD or S350GD – EN 10346
- Component II:** S235 – EN 10025-1, S280GD, S320GD or S350GD – EN 10346

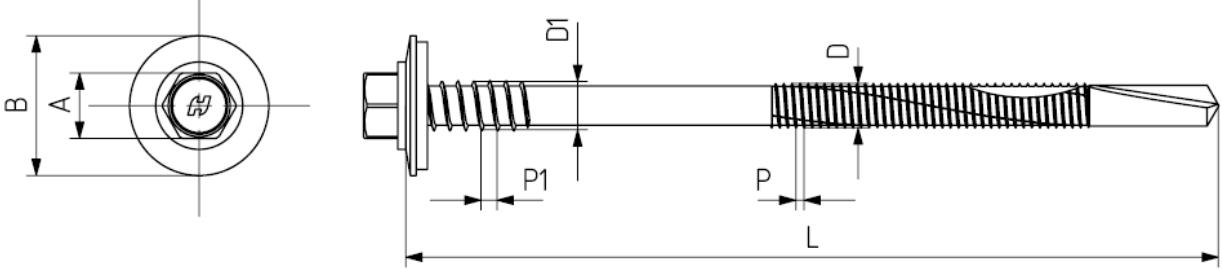

Drilling capacity: $\Sigma(t_{N2} + t_{II}) \leq 12 \text{ mm}$

Timber substructure
No performance assessed

Annex 30
of European
Technical Assessment
ETA-13/0421

Determination of design values

1. Determination of Design Shear Resistance

The determination of the design values of the shear resistance depends on the type of substructure.

For Metal Supporting Substructures the following applies:

The design values $V_{R,d}$ of the shear resistance are the characteristic values of the shear resistance divided by the recommended partial safety factor $\gamma_M = 1,33$. The recommended partial safety factor γ_M should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

For Timber Supporting Substructures the following applies:

The design values $V_{R,d}$ of the shear resistance are the characteristic values of the shear resistance multiplied by k_{mod} according to EN 1995-1-1 Section 8.7 (Screwed connections), Table 3.1, and divided by the recommended partial safety factor $\gamma_M = 1,33$. If failure of the inner face with the thickness t_{N2} and not failure of the timber substructure is the relevant failure mode then $k_{mod} = 1,0$.

The recommended partial safety factor γ_M should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

2. Determination of Design Pull-through, Pull-out and Tension Resistance

The design values of the pull-through resistance are the characteristic values of the pull-through resistance divided by the recommended partial safety factor $\gamma_M = 1,33$. The recommended partial safety factor γ_M should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

The determination of the design values of the pull-out resistance depends on the type of substructure.

For Metal Supporting Substructures the following applies:

The design values of the pull-out resistance are the characteristic values of the pull-out resistance divided by the recommended partial safety factor $\gamma_M = 1,33$. The recommended partial safety factor γ_M should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

For Timber Supporting Substructures the following applies:

The design values of the pull-out resistance are the characteristic values of the pull-out resistance multiplied by k_{mod} according to EN 1995-1-1 Section 8.7 (Screwed connections), Table 3.1, and divided by the recommended partial safety factor $\gamma_M = 1,33$. The recommended partial safety factor γ_M should be used in cases where no value is given in national regulations of the Member State where the fastening screws are used.

The design tension resistance $N_{R,d}$ is the minimum value of the design values of either pull-through resistance or relevant pull-out resistance for the corresponding connection.

3. Design Resistance in case of combined Tension and Shear Forces (interaction)

In case of combined tension and shear forces the linear interaction formula according to EN 1993-1-3, section 8.3 (8) should be taken into account.
